Subject: ICP Fall Seminar

Dear Julie,

If you are interested in the latest developments in elemental spectroscopy, you can sign up for a free seminar being given by Thermo Scientific in select cities across the United States and Canada starting October 5th. There will be a number of presentations in the morning followed by a lunch provided by Thermo, and a subsequent workshop on software and applications. Presentations will focus on issues pertinent to both ICP-OES and ICP-MS, including sample preparation, matrix interferences, and speciation. A Glass Expansion representative will be present at some of the sites to discuss your specific sample introduction issues. For more information and to register, go to the link below.
